

eSwitch lighting controllers are purpose-built for Councils to help them manage the lighting operations at a single sporting venue, or a network of venues, within any given region.

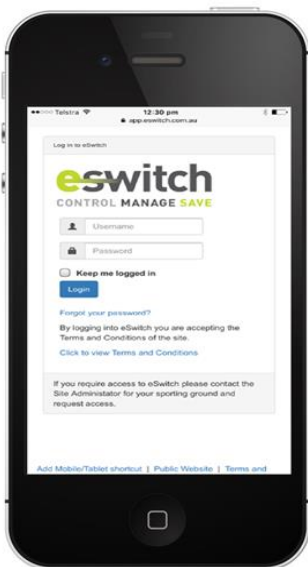

This technology enhances existing Council-Community relationships through:

- **Keyless control:** venue lighting can be operated from any smartphone via a secure individual login.
- **Sustainability:** the software provides full oversight of when the lights are used and for how long, ensuring greater accountability and less energy waste. Curfew/lockout times can be set for each field to avoid unnecessary energy consumption and neighbour complaints.
- **Safety:** approved users can operate venue lights using their smartphone from the safety of their car, clubhouse, or anywhere they have mobile phone access, rather than accessing switches in the dark.
- **Analytics:** an online database records all activity and enables full reporting, accountability, and cost allocation among users.

## How eSwitch Works

Two components make up the eSwitch system. At the venue a secure, weatherproof, vandal-proof Control Box houses the electronic equipment and switching accessories. Within Council, the Cloud Based application puts the control of venue lights at their fingertips anywhere, anytime, and enables them to securely allocate third-party use at the click of a button. This software communicates with the Control Box via SMS.

Secure login in from any smartphone or computer

Turn field lights on and off from any location

Handover feature allows continuous use by multiple users

eSwitch complements Councils' existing venue hire process and can be easily integrated in place of traditional key allocation, whether it be a one-off or casual venue hire, or recurring season-long bookings.

The licensed eSwitch software is delivered via a fixed quarterly subscription service plus SMS costs, with no limit to the number of users who can be allocated at any one time.

To ensure affordability, subscription costs have been kept to a minimum and our ability to bulk purchase SMS allows us to pass on considerable savings to our clients. With these costs combined, the average Venue can operate eSwitch for less than \$400 per year\*, easily offset by the savings generated by the sustainable and accountable use of venue lights and the energy they consume.

*\*Based on an average of 2 switching operations per night, 4 nights per week, 30 weeks per year.*
